EDUCATION

UNIVERSITY OF PITTSBURGH

PITTSBURGH, PA

BS: Computer Science, Concentration in Math (GPA: 3.9/4.0)

Expected Graduation: April 2027

- Courses: Data Structures & Algorithms, Discrete Structures, Assembly Language & Computer Organization, Systems Software, Cybersecurity, Web Design, Data Science Foundations, Database Management, Networking, Operating Systems.

WORK EXPERIENCE

Coinbase

New York, NY

Software Engineer Intern

May 2025 - Present

- Architected ML-driven IAM security system processing 2+ years of logs with BERT-based classification on 14K+ cloud roles, automating entitlement reviews and reducing MTTR from hours to 7 minutes - eliminating 48% of manual overhead.
- Built serverless least-privilege infrastructure using AWS Lambda and Python to auto-provision scoped IAM policies for 200+ microservices, reducing overprivileged accounts by 73% and accelerating secure developer onboarding by 61%.

Anthropic

Pittsburgh, PA

Claude Campus Ambassador

August 2025 - Present

- Drove product adoption by hosting workshops & hackathons, attracting 200+ attendees + 3x increase in active Claude users.
- Partnered with faculty and student orgs to integrate Claude into coursework and hackathon projects, creating sustained growth channels and recurring feedback loops for product teams.

Palantir

Remote

Software Engineer Extern

November 2024 - January 2025

- Engineered defense analytics platform integrating classified datasets into Palantir Foundry + AIP, enabling analysts to generate situational awareness dashboards 2x faster while automating 80% of previously manual intelligence workflows.
- Delivered full-stack defense applications with Python ML pipelines, TypeScript/React interfaces, and automated CI/CD - architecting scalable, security-hardened software systems for mission-critical defense operations.

Vanguard

Malvern, PA

Software Engineer Intern

May 2024 - August 2024

- Developed ML-powered economic forecasting dashboard using React + Flask with FRED API integration, improving GDP nowcast accuracy by 18% and driving adoption by 20+ portfolio managers managing \$500M+ in macro trading positions.
- Implemented enterprise security framework embedding OWASP controls across React and Node.js applications, establishing threat detection capabilities and anomaly monitoring systems protecting \$10T+ in client assets.

Lockheed Martin

Orlando, FL

Software Engineer Intern

June 2021 - August 2023

- Built AWS cost optimization platform integrating Cost Usage Reports (CUR) with real-time Tableau dashboards, identifying \$500K in annual savings opportunities through automated resource monitoring and financial transparency tooling.
- Conceptualized and implemented a user-focused interface for cost and usage reporting tools on AWS; used Figma to iterate prototypes and validate design with internal teams.

PROJECTS

TicAI

- Architected autonomous incident response system with React, FastAPI, Redis Streams, and PostgreSQL, reducing MTTR by 65% in pilot deployments and securing 3 enterprise LOIs including Fortune 100 client within 2 months of launch. (2M Eval.)
- Deployed intelligent alert automation autonomously, resolving 93% of routine incidents while generating detailed rollback plans for complex cases, cutting engineering on-call burnout and system downtime by 65%.

Agentrix

- Built production NLP microservice processing 500K+ user queries with real-time sentiment analysis, improving support routing efficiency by 17% and reducing operational costs by 21% through optimized Docker-based deployments.
- Enhanced ML model performance achieving 10% accuracy improvement through advanced preprocessing and hyperparameter optimization, directly improving customer satisfaction scores and conversation resolution rates.

Kolb Academy

- Engineered scalable education platform with Django REST API, AWS Lambda autoscaling, and DynamoDB backend, improving system performance by 32% and handling 50% increased user traffic during peak enrollment periods.
- Implemented CI/CD automation pipeline with comprehensive testing frameworks, accelerating release velocity by 40% while reducing production bugs and deployment risks across the platform.

SKILLS

Languages: Python, C++, JavaScript, TypeScript, Java, Rust, SQL, Go, C, HTML, CSS

ML/AI: PyTorch, TensorFlow, HuggingFace, scikit-learn, BERT, spaCy, NLTK, OpenAI API

Frameworks/Tools: React, Node.js, Django, Flask, FastAPI, Docker, Kubernetes, Git, CI/CD

Cloud/Databases: AWS (Lambda, EC2, S3, DynamoDB, API Gateway), PostgreSQL, MongoDB, Redis
